Software Engineer with 6+ years of experience. I have large hands-on experience efficiently coding web apps. I mostly work with the backend and architecture.

RELEVANT SKILLS

Python   PostgreSQL   ClickHouse   Redis   FastAPI   Django   Flask
Celery   Kubernetes   Terraform   Ansible   Docker   GitLab CI

PROFESSIONAL EXPERIENCE

Senior Software Engineer at Semrush   *April 2018–Present*
Semrush is the online visibility management and content marketing SaaS platform.

- Create ImpactHero from zero: AI tool that breaks down content by buyer journey stages, detects the most impactful copies and gives tips on improving content strategy for companies.
- Designed and built an asynchronous backend for SEO Writing Assistant: check user's text and get recommendations. Works in our platform and in Add-ons: Google Docs, MS Word and WordPress.
- Immersed into the DevOps ideology. Managed infrastructure as code in kubernetes, helm and terraform.
- First two years I worked at the platform team: developed an asynchronous backend in Python for microservice which combines all semrush tools into one and maintained and improved API mailer system.

Software Engineer | Python Developer at Magnit   *January 2016–April 2018*
Magnit is one of Russia's leading food retail chains, number one by the amount of stores and geographical coverage

- Designed and built a configuration management system for routers: admin panel, run commands on routers, updating firmware, restore from a backup after incorrect update.
- Develop a Windows application for updating the firmware and configure routers OpenWRT and MikroTik.
- Development of a MAC address unlocking system for Cisco/Juniper/HP switches: there can be only one client behind one switch port, the admin panel allows you to quickly find and unblock MAC addresses.

EDUCATION

South-Russian State University of Economics and Service   *2007 - 2010*
Engineer's degree Information Technology (GPA: 4.9/5.0)
